Performance Goal
1. Design - Optimise packaging to achieve resource efficiency and reduce environmental impact without compromising product quality and safety.

The Strategy
Where possible, energy and water consumption should be reduced by: minimising the amount of material used for packaging; taking steps to make production and distribution more efficient; and considering the use of renewable energy.

Why Is It Important?
Efficiency improvements reduce the environmental impacts of packaging and generate financial savings across the packaging supply chain. Improving energy efficiency is the most cost-effective way to reduce greenhouse gas emissions.

Key Questions
Has material in the packaging been minimised to reduce water and energy used in production (the company / suppliers)?

KPI **Performance Goal Ref** 1.01
Maximise water and energy efficiency

Initial Status (Company complies or not appli

Justification/Evidence (required in all cases)

Opportunities/Risks/Barriers -> Action Proposed

NOTE: All fields below are MANDATORY

Action Plan/Annual Report **By Whom?**
Annual Report

Weeks to Complete **Due Date**
40 Apr-11

Closed (Auth Signature) **Date Action closed**

Note: When complete Sign. by auth person only

NOTE: PACKAGING TYPES
Ensure that each review covers 3 packing types
PRIMARY: Packaging surrounding product purchased by consumer.
SECONDARY: secures multiples, e.g. boxes
TERTIARY: e.g. stretchwrap over shippers.
